

EDUCATION

Bachelor of Technology (B.Tech) in Artificial Intelligence & Machine Learning Uttarakhand Technical University	08/ 2022 — 06/2026 Dehradun, Uttarakhand
Higher Secondary with Computer Science Kendriya Vidyalaya No.2 N.H.P.C Banbasa ,Champawat, Uttarakhand	04/ 2020 — 04/2022 Champawat ,Uttarakhand

EXPERIENCE

AI Intern Wavygo	06/2026 — Present
- Built and deployed GenAI-powered features for WavyGo's bike/scooter rental platform, including a LangGraph-orchestrated RAG chatbot serving website and app support queries. - Designed and maintained the retrieval pipeline — document ingestion, ChromaDB indexing, and OpenAI embeddings — to keep responses grounded in current FAQ and policy content.	

SKILLS

Programming Languages: Python, HTML, CSS, JavaScript, SQL, Fastapi
GenAI/LLM: LLMs (OpenAI, Gemini), LangChain, LangGraph, RAG (Retrieval-Augmented Generation), Prompt Engineering, Agentic AI / Multi-Agent Systems, Embeddings, HuggingFace Transformers, LangSmith, Model Context Protocol (MCP).
AI/ML Core: Machine Learning Fundamentals, Deep Learning, NLP, Model Evaluation & Fine-tuning , Feature Engineering.
Backend & APIs: FastAPI, REST API Design, SQLAlchemy, Async Python.
Python Libraries: NumPy, Pandas, Scikit-learn, FastAPI, Pydantic, Requests, python-dotenv.
Databases & Cloud: PostgreSQL, Redis, Vector Databases (FAISS, Chroma)
Tools & Platforms: Git/GitHub, Docker, Cloud (AWS/GCP), LangSmith.
Skills: OOPs, DSA , Problem Solving, Analytical Thinking, Cross-functional Collaboration.

PROJECT

Tripo — Multi-Agent AI Travel Planner Link: Agentic-Traveller	
Technologies Used: HTML, CSS, JavaScript, Python, LangChain , MCP (Model Context Protocol), Docker, pydantic, LangGraph, LangSmith, GPT, Render, PostgreSQL, FastAPI, Async ,Vector Database , RAG , Prompt Engineering, Embedding Models.	
- Built a multi-agent backend with 5 specialized LangGraph agents (destination research, itinerary building) collaborating to generate personalized travel plans for destinations worldwide in ~ 6 seconds. - Diagnosed and fixed a production-blocking async/MCP integration failure caused by a nest_asyncio conflict, restoring agent tool-calling reliability. - Containerized the full stack with Docker for reproducible deployment; documented setup in a professional README.	
JurisSense — Agentic RAG Legal Assistant for Indian Law Link : Legal-Assistance	
Technologies Used: FastAPI, ChromaDB(all-MiniLM-L6-v2 embeddings), Groq (Llama 3.1), DuckDuckGo (Indian-law filtered), IndianKanoon scraper.	
- Architected a full backend rebuild across 7 independent modules, powering a RAG pipeline indexed over 2,409+ chunks across 9 Indian legal acts using all-MiniLM-L6-v2 embeddings. - Currently developing LangGraph-based agentic retrieval to replace single-shot RAG, targeting multi-step reasoning for complex legal queries (e.g. cross-referencing clauses across multiple documents). - Added an ms-marco-MiniLM cross-encoder for re-ranking retrieved passages and a DeBERTa NLI model to verify generated answers against source text, reducing unsupported/hallucinated claims	
WavyGo — Website & App Support Chatbot Link : WavyGo-bot	
Technologies Used: Python, FastAPI, LangChain, LangGraph, ChromaDB, OpenAI, LangSmith	
- Built a production RAG chatbot for WavyGo's website and app, indexing 5 FAQ/policy documents in ChromaDB with OpenAI embeddings, orchestrated through LangGraph for multi-step retrieval and response generation. - Secured the backend with FastAPI and JWT authentication; used LangSmith to trace and debug retrieval and generation behavior across the pipeline.	

Certifications / Achievements

Certifications	Achievements
- IBM – Databases and SQL for Data Science with Python. - IBM – Python for Data Science, AI & Development - Machine Learning with Apache Spark – IBM - Building LLM Applications With Prompt Engineering. - Neo4j Fundamentals — Neo4j	State-Level Hackathon Finalist (EVORA) (Nov 2025) - Designed an environmental awareness platform using gamified learning and real-world engagement. - Link - Evora
